

final piece

what does it need to do?

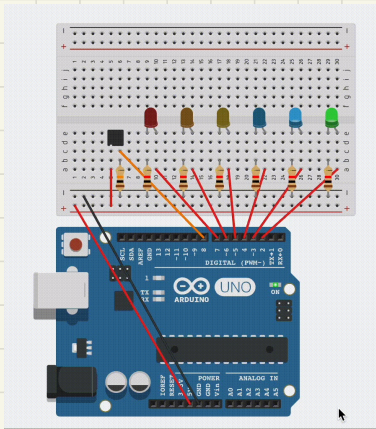

- feasibly (time & resource restraints) create a 'fuzzy' & 'childlike' response
- tactile, user is encouraged to be a part of the light show (running hands across the stars)

what will i need?

- arduino
- wires (pin to pin & crocodile) ^{conductive thread}
- fabric, embroidery hoop, yarn & floss, map pieces/pages of a book?
- lighting: neopixels? leds?
- piezo buzzer

how will it work?

- future improvements? → when the piece is connected to the comp a calming light/sound show plays
- touching a star can turn the show off
- bigger, with other outputs

<https://medium.com/design-grip/digital-hourglass-arduino-g3441924f88c>

embedded leds

embroidered stars
(colour scheme: aquatic & spacey)

conductive thread (hold the anode or cathode pins of the leds)

pieces of a

map → growing up
→ serendipity / adventure
